ADR in the Age of Cybersecurity

By Steven A. Certilman and Eric W. Wiechmann

Not too long ago, back when paper and pen ruled the world, just about all arbitrators or mediators had to do to ensure the security of confidential case records was lock their office door and not leave their briefcase on the train. Not so any more.

Information security is a global challenge, and as even the computer systems of some of our most vital national security agencies and corporations have been hacked, preventing data intrusion must be regarded as a herculean task. Many of us have used such mental tricks as believing that we are too small to be hacked, or that with so many more tempting targets out there our anonymity makes the risk infinitesimal. It goes without saying that hiding behind these self-deceptions falls short of a reasonable effort to maintain cybersecurity. Even the solo and small firm practitioners among us must face the reality that reasonable steps are required of all of us. The time to start is now.

Why Do We Care?

Before we review some of the many measures that may be adopted by alternative dispute resolution professionals as part of a cybersecurity strategy, a quick look at the professional reasons *why* we should care is warranted.

The community of ADR providers is a diverse lot. We have people in all forms of practice, from partners in the largest firms to solo practitioners and non lawyers. In a sense, we are a cross-section of the computing world. While those practicing in large firms may have minions to address cybersecurity issues, doing so is far more challenging for solo and small firm practitioners. Nevertheless, we must resist the temptation to bury our heads. We are bound by the ethical duty to safeguard the confidences of the parties to our proceedings. This duty is independent of, and in addition to, the similar duty of those of us who are attorneys.

Life used to be much simpler for arbitrators as we contemplated our confidentiality obligations under the rules and ethical guidelines of the arbitral organizations and courts through which we serve. Fifteen years ago, when we reviewed Rules R-23 and R-25 of the Commercial Arbitration Rules of the American Arbitration Association (AAA)¹ or Article VI(B) of the ABA/AAA Code of Ethics for Arbitrators in Commercial Disputes,² we focused on a few clear and obvious duties: to refrain from discussing the identities of the parties or the subject matter of the dispute and to keep confidential, and not lose, the pleadings, submissions or evidence of the parties. A little common sense and discretion seemed all that was required. The materials to be kept confidential were

typically maintained and exchanged in a hard copy paper format. Even native electronically stored information was typically produced for disclosure in paper format, and later through a CD-ROM or thumb drive. There was little if any focus on whether the document production might contain sensitive personal data.

“Arbitrators today must take their confidentiality responsibilities to a whole new level.”

Times have changed! With the ubiquity of email usage and the explosion of electronically stored data, electronic transmission of data and cloud-based data storage, the need for a new level of information security has become apparent. Examples of how easily this information can be unlawfully accessed by criminals, competitors, NGOs such as Wiki-Leaks and governments have come with alarming regularity, causing a reassessment of business processes that are affecting the working environment of businesses, attorneys, government and others. Businesses, which now budget significant amounts to the protection of their sensitive information, have come to expect a similar focus on vigilance by their attorneys. We, as arbitrators, must see ourselves as sharing the same responsibility for diligently protecting information entrusted to us for the resolution of disputes. To be sure, arbitrators today must take their confidentiality responsibilities to a whole new level. Administering bodies (AAA, JAMS, CPR and the LCIA, to name just a few) have begun to impose specific cybersecurity duties on arbitrators,³ and those arbitrators who are also attorneys must be equally focused on their obligations under the Rules of Professional Conduct of their states of admission and the ABA and state codes of ethics.⁴ Prominent membership organizations in the field have done so as well.⁵ Moreover, depending on the nature of their practices, arbitrators may also need to become familiar with, and comply with, state, federal and even international data protection laws such as HIPAA,⁶ or the European Union General Data Protection Regulation⁷ (GDPR). Many corporate and governmental parties impose their own data protection requirements as well.

The breach of confidential data or documents used in an arbitration or the unintentional release of such information can, in the absence of adequate precautions having

STEVEN CERTILMAN (steven@certilman.com), an attorney, Chartered Arbitrator and CEDR Accredited Mediator, is a frequent author and speaker on ADR topics.

been taken by the arbitrator, lead to serious professional consequences. With clients increasingly cautious about the dissemination of confidential data in their possession, a data breach caused by an arbitrator's failure to take reasonable precautions can form the basis of a grievance being filed against a lawyer-arbitrator, sanctions being imposed by the arbitral organization administering the proceeding, and loss of membership on an arbitration panel or in a professional membership organization. Even with the general immunity that arbitrators and mediators enjoy under the laws or court rules of many states⁸ and the rules of many arbitral organizations,⁹ a cybersecurity incident can lead to a lawsuit and can possibly be career threatening.

What follows are observations and suggestions designed to assist ADR professionals in avoiding, or at least minimizing, inadvertent or unauthorized disclosure of confidential party information. While few will adopt every suggestion, it is recommended that they all be considered in deciding whether you are taking reasonable steps to protect the sensitive material. In the interest of facilitating review and implementation, it is provided in outline format.

I. Storage of Data

a. Internal Hard Drive or a connected external hard drive

- i. The most insecure format.
- ii. Click on a link in the wrong email and you open a door for malware or unauthorized access.
- iii. If your computer has been infiltrated, this data likely will be as well.
- iv. Risk of ransomware, where you lose access to your data unless a ransom is paid.
- v. External drives have become very small and easy to use, but they can easily be lost if used portably.
- vi. Is the drive encrypted? Much better, but slows the computer down.
- vii. Generally external drives need a cable, which are easily forgotten.
- viii. These drives are subject to crashing (mechanical malfunction).

b. Cloud-Based (e.g. Google Docs, iCloud or Dropbox)

- i. How does the data get there?
- ii. Services may be either encrypted or unencrypted. If encrypted, who holds the key?
- iii. Look for services that have "end to end" encryption? Data is encrypted getting to their servers and encrypted while residing on their servers.

- iv. Many services tell you in their Terms of Service that they have the right to "mine" your data and use for marketing or to sell to other marketers. Generally, e.g., iCloud, Google Docs.
- v. With the very popular Dropbox, they hold the encryption key rather than you, so documents can be made available by them without your involvement, e.g., under court order. While you could encrypt your own documents individually, this is rarely done.
- vi. There are other services such as Tresorit (tresorit.com), a modestly priced service similar to Dropbox except that it has end-to-end encryption and YOU, not they, hold the encryption key. This service is becoming increasingly popular for that reason. It is presently \$20 per month for 1 Tb of storage. They also offer a secure way to send attachments similar to Dropbox.

c. USB Drive

- i. Probably the worst choice. The military commonly disables USB drives in its computers. Risk outweighs convenience.
- ii. So easy to lose. May carry viruses built in and invisible, especially freebies distributed at conferences, etc. for marketing purposes.
- iii. Easy to misplace, or be used for a later purpose.
- iv. If you must use one, make sure it is encrypted.

d. Re-writable CD-ROM

- i. Very 1990s. Almost not worth mentioning.
- ii. Most portable computing devices do not even have CD drives any longer.
- iii. At a minimum, password protect.

e. The challenge is in finding the right balance between convenience and security

II. Communications

a. Consider discussing confidentiality and security issues during your preliminary conference. It is an opportunity to bring a great deal of certainty to the security concern. There are various permutations of responsibility. See below.

b. For you, with their information

- i. Consider building into your first preliminary order a confidentiality and security agreement.
- ii. Check the arbitration clause to determine whether the parties have already agreed to provisions which will bind you.
- iii. See AAA Rule R-23(a).

The arbitrator may issue order “conditioning any exchange or production of confidential documents and information, and the admission of confidential evidence at the hearing, on appropriate orders to preserve such confidentiality.”

iv. See ICDR Art. 37(2):

1. Confidential information disclosed during the arbitration by the parties or by witnesses shall not be divulged by an arbitrator or by the Administrator. Except as provided in Article 30, unless otherwise agreed by the parties or required by applicable law, the members of the arbitral tribunal and the Administrator shall keep confidential all matters relating to the arbitration or the award.

versions of such data if such masking is generally accepted for public use of such data (e.g., last four digits of credit card or social security numbers). The parties shall not submit to the Tribunal un-redacted documents containing personal identifying numbers, individual health information or financial information unless there is a demonstrated need for the Tribunal to have such information due to the matters at issue in the arbitration.

- vi. Agree when to use (or not use) unencrypted email. Encrypted email is readily available but use is cumbersome.
- vii. An alternative is to password protect individual documents as necessary.

“With the ubiquity of email usage and the explosion of electronically stored data, electronic transmission of data and cloud-based data storage, the need for a new level of information security has become apparent.”

2. Unless the parties agree otherwise, the tribunal may make orders concerning the confidentiality of the arbitration or any matters in connection with the arbitration and may take measures for protecting trade secrets and confidential information.

v. If appropriate, consider including a clause such as the following, written by arbitrator Sherman Kahn:

The parties are instructed to jointly consider methodologies to protect confidential and private data that may be exchanged in the arbitration and/or submitted to the Tribunal. Such methodologies should take into account the parties’ need for information in the arbitration and whether such information must be provided to the Tribunal or exchanged among the parties in light of the sensitivity of the information and its relevance to the proceedings. The parties shall redact from information provided to the Tribunal any sensitive personal identifiers such as social security numbers (or other national identification numbers), dates of birth or financial account numbers, but may submit partially masked

- viii. Once you develop a preferred communication protocol, explain what it is and ask if any objections.
- ix. If necessary, can use HIPAA compliant process, have a plan.
- x. Address when you will destroy the file and delete electronic records.

c. The parties, with each other’s information

- i. Consider addressing the partial or complete redaction of unnecessary personal confidential information such as Social Security numbers, dates of birth, financial account numbers, medical information, etc..
- ii. If exchanging documents on a CD, consider a format in which the entire CD can be password protected and send the password separately.
- iii. To facilitate confirming all this in the order, you may wish to have “standing orders” for confidentiality (should include how witnesses, experts, consultants will be bound by confidentiality and cybersecurity measures and how that will be enforced).

d. As you referee issues related to discovery, and the hearing process, continue to have in mind the requirements of the governing rules such as AAA Rule R-23(a) and ICDR Art. 37(2)

e. General communication issues

Avoid the use of public Wi-Fi. If you must use it, as most of us do, use a VPN. Unsecured public Wi-Fi can be easily hacked and the hacker, who technologically positions himself between you and the web, can capture your every keystroke and distribute malware to your computing device, without you knowing it. If you plan to use a public Wi-Fi network (e.g., hotel, airport, mass transit, Starbucks), purchase a Virtual Private Network service. With a VPN, your transmissions are encrypted and most hackers, who are looking for easily accessible information, will discard it.

When browsing on the web, look at the address bar. If the Internet Address does not begin with "https://", it is not an SSL (Secure) connection. Use extreme caution before entering authentication information such as passwords into unsecured sites. The login page of most websites will be an SSL page. Always use the https:// option if given a choice.

Keep Wi-Fi and Bluetooth off when not using them. Not only does this close the door to hackers, it will greatly extend your battery life.

III. Use of Email

a. Reply-all error

- i. We're all busy, hurriedly exchanging emails with case administrators, co-arbitrators and others. We hit the send button and then it sinks in—you've just accidentally sent confidential information to the wrong party
 - ii. The ABA's stance on the ethics applicable to a party's accidental receipt of privileged information has evolved over time. Today's rules ask attorneys simply to inform the sender that they've received the information
- b. Any time you receive an unexpected email from a website urging you to click a link or open a document, put the process into slow motion and consider whether the request makes sense. An email that purports to be from a site you use, and says so in the sender box, may be a forgery. There are two easy things you can do to ensure the email is legitimate. If you are using Microsoft Outlook, roll your cursor over the link but do not click it. The email address or destination website of the link will appear on the lower left-hand corner of the Outlook window. If it is not the site you are expecting, hard delete (press shift + delete) the email. Also, you can double click on the sender's name to see the address from which it actually came. If it isn't the address you are expecting, hard delete as well.

IV. Concerns That Arise at Issuance of the Award

a. What confidentiality issues come into play in the award writing process?

- i. What if the award contains confidential information that a party would not wish to have filed in court in a confirmation or vacate proceeding? Some courts refuse to seal even those awards as part of the enforcement process. Can the arbitrator modify it?
- ii. Not likely. See AAA Rule R-50 and ICDR Art. 33. Outside of permissible scope.

"A cybersecurity incident can lead to a lawsuit and can possibly be career threatening."

- iii. But see Section 11 of the Federal Arbitration Act (9 U.S.C. 11), under which the District Court is authorized as follows: "Where the award is **imperfect** in matter of form not affecting the merits of the controversy. The order may modify and correct the award, so as to effect the intent thereof and promote justice between the parties." Can an argument be made to modify to protect privacy under this language?
- iv. Collaterally, do we have a duty to draft the award to avoid exposing party confidential information? Probably, at least where we know we are doing so.
- v. Underscores need to consider this issue when drafting the award.
- vi. Workarounds? (Show draft award to parties for review for confidential information).

V. Post-proceeding Concerns

a. Continuing duty to parties

b. Disposal of file

- i. Is the paper file treated any differently from the electronic records?
- ii. In its form Award transmittal letter, the AAA says:

Pursuant to the AAA's current policy, in the normal course of our administration, the AAA may maintain certain electronic case documents in our electronic records system. Such electronic documents may not constitute a complete case file. Other than certain types of electronic case docu-

ments that the AAA maintains indefinitely, electronic case documents will be destroyed 18 months after the date of this letter.

c. There is no hard and fast rule for how long to retain documents

- i. Certainly for the modification period (See the FAA, 9 USC 9-11, state law (e.g., CPLR 7509) and the applicable rules).
- ii. Probably even long enough for the possibility of a vacatur proceeding to play out. In New York, that's 90 days for the vacatur period plus the duration of a pending proceeding. CPLR 7511.

VI. Summary of Best Practices

a. Take reasonable measures to avoid malware, including ransomware

- i. Maintain anti-virus/anti-malware software and regularly monitor it to ensure that the definitions are up to date and that it has not been disabled.

- c. Cellular data is more secure but you should still use a VPN as they too can be attacked.
- d. So, always use an end-to-end encrypted VPN any time you are out of the office.
- e. With your own office Wi-Fi, use an inconspicuous network name, set it up for WPA2 encryption, change your network key regularly and make sure to change the router's password from the factory default!
- f. Be careful of international travel with your iPad or laptop that has confidential arbitration information stored. In certain countries as soon as you activate your device on their cellular system your device may be penetrated by malware. Many people travel to these countries with a clean device with nothing on it which is of any concern, and then wipe the device clean after leaving the country.
- g. Insurance—make sure your professional liability insurance policy includes cyber liability and data breach response coverage. It

“Make sure your professional liability insurance policy includes cyber liability and data breach response coverage.”

- ii. Maintain constant backup using a service such as Carbonite. Backing up data hourly would seem to be an appropriate level of protection.
- iii. Avoid phishing attacks. A DOJ report says that on average more than 4,000 ransomware attacks have occurred daily since January 1, 2016.
 - 1. Spear phishing attacks are emails that try to get you to click on a malicious link.
 - 2. Whale phishing emails are similar but they appear to come from a CEO or other VIP and ask you to deliver valuable information.
 - 3. Use the mouse rollover technique to check the link and click on the sender's email address to verify that it really comes from the purported sender. Generally this must be done on a desktop browser.
 - 4. Keep your guard up!
 - b. Any public Wi-Fi is inherently insecure. Public Wi-Fi is any Wi-Fi you do not control. That includes hotel, airport and other public Wi-Fi networks. Avoid them unless you are sure it is legit and you are using a VPN with end to end encryption.

is available as an add-on if not part of your basic policy. Even if you do not maintain an arbitrator malpractice insurance coverage, consider a separate policy for cybercrime and privacy claims. For instance, HUB International (<https://www.hubinternational.com/>) provides such coverage for a fairly nominal charge.

- h. Upgrade your passwords.
- i. Consider using a password manager. It can store all your passwords.
- j. Update your software—older versions may lack security improvements and make it easier to infiltrate your system.
- k. Don't let your browser memorize your passwords (such as your password to the e-Center).
- l. Use services that require (or opt to utilize) two-factor authentication wherever possible. You get an email or a text message which you have to enter to login.
- m. Encrypt your portable devices such as smart phones and tablets. The operating systems usually include the ability standard

- n. Check the site www.havebeenpwned.com to see if your account information is showing up on nefarious websites, which will mean at one point or another your computer or an online account has been hacked. It's an identity theft early warning site. You input your email addresses and user names and the site will tell you if they come up in the sites database of known hacks. It's a good way to screen for your password having been stolen.
- o. Carefully handle and dispose of written documents (usually you do not need both an electronic and hard copy of the material)
- p. Devices like the Amazon Alexa are always listening! That's how she hears her name to wake up! Guess where everything said in its presence is sent for voice recognition?

For most of us in ADR, particularly full-time neutrals who typically are solo practitioners, focusing on our greatest vulnerabilities is likely the best first step. It's a process. Let's all get started!

NEW YORK STATE BAR ASSOCIATION

Online Publications

In Partnership with Fastcase

Already a NYSBA member with free access to Fastcase legal research?

Upgrade now to also access NYSBA Online Publications Library on the Fastcase database. Visit www.nysba.org/fastcase

With a subscription to the NYSBA Online Publications Library, you can browse or search NYSBA legal publications, such as the complete award-winning Practical Skills Series, and quickly link to the cases and statutes cited through Fastcase. In addition to traditional legal research, attorneys will enjoy online access to over 60 practice-oriented professional publications covering many different areas of practice. The NYSBA Online Publications Library is not available on any other online platform.

Get the complete NYSBA Online Publications Library and enjoy exclusive members-only savings that will more than cover your membership dues. And, your annual subscription includes all updates during the subscription period to existing titles as well as new titles – at no extra cost! Subscriptions to individual titles are also available.

A member subscription is a fraction of the cost of the complete hardbound library. For more information visit www.nysba.org/fastcase.
